

Request for Quotation (RFQ): Bear Spray Formulation & Filling

Company: Paws Off

Product: Bear Deterrent Spray (Aerosol)

Target Market: United States (EPA Regulated)

1. Project Overview

Paws Off is seeking a formulation and filling partner to produce a bear deterrent spray for the U.S. market. The product must be formulated to qualify for a "Me-Too" registration pathway under the U.S. Environmental Protection Agency (EPA) PRIA B660 category. This requires the formulation to be "substantially similar" to an existing registered product (specifically EPA Reg. No. 55541-2).

2. Formulation Requirements

The formulation must strictly adhere to the following composition to meet EPA requirements for the target registration pathway. All inert ingredients must be on the EPA List 4B (Inert Ingredients of Minimal Concern).

Component Function	Proposed Ingredient	Required % by Weight
Active Ingredient	Oleoresin Capsicum (yielding exactly 2.0% capsaicinoids)	~2.0%
Propellant	Propane / Isobutane Blend (A-70)	65.0% - 75.0%
Primary Solvent	Isopropyl Alcohol	15.0% - 25.0%
Co-Solvent	Propylene Glycol	2.0% - 5.0%
Emulsifier	Polysorbate 80	1.0% - 3.0%

Note on Flammability: This formulation will trigger an "Extremely Flammable" physical hazard warning, which is expected and aligns with the target registration profile.

3. Performance Specifications

The filled aerosol product must meet the following performance criteria:

- **Spray Pattern:** Heavy fog delivery system.
- **Effective Range:** Must project a minimum of 35 feet (10.6 meters).
- **Empty Time:** At least 7 seconds continuous spray.
- **Operating Temperature:** Must function effectively in freezing conditions.

4. Canister Specifications

The formulation will be filled into the following canister type (sourced separately or provided by the filler):

- **Material:** Steel
- **Style:** Slant-shoulder
- **Dimensions:** 180mm (height) x 53mm (diameter)
- **Regulatory Standard:** Must meet U.S. Department of Transportation (DOT) 2Q burst pressure standards.

5. Quotation Request

Please provide a quotation that includes:

1. **Cost per unit** for formulation and filling (excluding canister cost, assuming we provide the DOT 2Q canisters).
2. **Cost per unit** for formulation, filling, AND supplying the DOT 2Q canisters (180mm x 53mm).
3. **Minimum Order Quantity (MOQ)** for initial production run.
4. **Lead time** for prototyping and testing.
5. **Lead time** for full production after prototype approval.
6. Confirmation of ability to source EPA List 4B approved inert ingredients.

Please submit your quotation and any questions regarding these specifications.
